

DENNE CONSTRUCTION LTD The logo for Denne Construction consists of the word 'DENNE' in a bold, orange, sans-serif font above the word 'CONSTRUCTION' in a smaller, black, sans-serif font.

THE SITUATION

Denne Construction had always had a good 'green policy'. Their construction practices were sympathetic to the environment, and their transport and waste disposal systems were similarly respectful. Lately, however, clients' questions had started to become more probing, with requests for actual evidence of Denne's commitment to the environment. The management team realised they needed a means of proving that they had robust Environmental Management System – and they approached EnviroSafety Solutions for help.

OUR SOLUTION

In November 2008, EnviroSafety Solutions started working with Denne's Supply Chain Manager to understand their existing policy, and create an Environmental Management System (EMS) that would blend in with their existing Business Management System. In just 2 months, the EMS was ready for roll-out to trial sites. EnviroSafety Solutions delivered training to key staff, covering environmental awareness and how to use the new system.

What EnviroSafety Solutions delivered

- A full audit and appraisal of Denne's existing environmental system
- Design, development and delivery of a bespoke Environmental Management System
- Step-by-step guidance towards attaining ISO 14001 registration
- A complete staff training programme
- On-going support and advice post-implementation

THE RESULT

Staff at Denne took to their new EMS system very easily. The benefits of the system quickly became apparent: client-facing teams were able to answer their questions confidently and competently.

Denne achieved certification to ISO 14001:2004 in June 2009, and have been able to leverage their new registration to secure a wider range of projects. Denne passed their most recent Surveillance Visit from SGS without any Corrective Action Requests.

Since the Environmental Management System has been such a success, Denne has asked EnviroSafety Solutions to carry out a full audit and appraisal of Denne's existing Health & Safety policy against BS OHSAS 18001...

NO TWO COMPANIES ARE THE SAME SO NO TWO SOLUTIONS ARE, EITHER

When you work with EnviroSafety Solutions, you can be certain that we will listen to your company's situation, needs and goals very carefully. Some of the questions we ask may seem surprising to you – but that's how we can be completely confident that the solution we develop for you meets your requirements perfectly.

Whether you are looking to create or update a policy, provide Health & Safety training for your staff, consult with an expert on a construction project or seek advice on CDM co-ordination, you can count on our expert team to develop a solution that is realistic, workable, and profitable – from initial outlay through to sustained return on investment.

EnviroSafety Solutions will help you to:

Build your reputation

Having robust Health & Safety and Environmental policies will impress your clients and give you the competitive edge – making you a company that more people want work for and do business with. Companies that place a strong emphasis on these aspects also attract and retain the right kind of people – keeping attrition rates down, and saving you time and money on recruitment.

Save time and money

Incredibly, many businesses still use separate consultancies for their Health & Safety and for their Environmental documentation and advice. Not only does this mean twice the time, people and cost, it can also result in conflicting practices. EnviroSafety Solutions, on the other hand, offers a one-stop shop: developing and implementing a complete set of policies and practices that mesh together perfectly.

Grow your capability

Every year, the Health, Safety and Environmental requirements involved in project tenders become more demanding and more complex. For companies without a robust set of policies and documents, business has become very tough, as they are not eligible to tender for work with discerning clients. EnviroSafety Solutions can provide you with all the guidance and documentation you need to put you in the running for those really big, profitable contracts – helping you grow your capability, your business and your bottom line.
